Skills

- C
- C++
- Python
- Data Structures
- MySQL

Experience

Adobe Systems, Noida — *Member of Technical Staff*

June 2018- PRESENT

- Single-handedly automated setup of secure agent on Azure for ETL service to smooth development cycle and reduce overall effort by one-click and thus reduce man-hours.
- I worked in 'Event Driven Automation' project which is being developed on Stackstorm as tool and python . I worked in pack development and integration in this.
- I am currently working in Adobe Campaign team to automate the rollback of customer's instances using ansible and python on AWS. This aims at reducing the whole cumbersome effort to running a script.

STRENGTHS

- Dedicated and a good team
- Player.
- Strong problem solving skills.
- Quick learner.

Percentage - 91.5 %

INTERNSHIP

TATA CONSULTANCY SERVICES

Projects

Automated Gmail Assistant System —
Here, with the help of Gmail API and Google Calendar API, we made a project in python using tkinter library. In this any event that comes in gmail could be directly stored in google calendar and a reminder for that event would be sent to the recipient.

Meeting Room Booking System —
In this we developed a website for booking meeting room using reactjs and java.

PySHELL —
A python shell like bash shell was made in this using python where we could run basic shell commands like mv, cp,rm etc. and give required result.
